

DAF ATe for Wiegmink Transport means 10% less fuel per year

*Edwin Wiegmink
Owner-driver,
Wiegmink Transport
The Netherlands*

“I achieve fuel savings of 10% which also means that my CO₂ emission reduces considerably. Thanks to that I am also able to meet my client’s Lean and Green targets.”

ATe Fact

DAF is introducing a new, lower-weight roof spoiler, featuring a further enlarged adjustment range and a unique adjusting mechanism. This makes it very easy for the driver to position the spoiler at the optimum height, thereby lowering fuel consumption by a few per cent. The new, adjustable roof spoiler is also 25 kilograms lighter, which increases the truck’s payload.
